

F-Secure Mobile Security™ 6 for Windows Phone 6.x RELEASE NOTES

COMPLETE SECURITY FOR YOUR SMARTPHONE

F-Secure® Mobile Security™ is a complete security solution for your smartphone. In the unfortunate event your phone is lost, stolen, infected by mobile malware or even spied on, Mobile Security helps to safeguard your personal and confidential data. The new Browsing Protection feature identifies which websites are safe to enter and which should be avoided. Harmful sites are blocked automatically to ensure safe surfing. With the help of the new remote GPS locator feature, you always know where your phone is located. F-Secure Mobile Security makes your smartphone completely safe for today's connected life.

KEY FEATURES

- Antivirus
- Antispyware
- Firewall
- Anti-theft: remote lock, wipe, and SIM control
- Browsing protection **NEW**
- Automatic over-the-air updates

See User Guide for the usage of the new new features.

INSTALLATION AND SYSTEM REQUIREMENTS

F-Secure Mobile Security™ 6 for Windows Phone client application supports devices running on top of Windows Phone 6, 6.1 and 6.5 versions. Also .NETcompact framework 2.0 or higher is required for the application to work. The upgrade is suggested if so needed.

The installation of the client application requires about 2.0 Mb of free disc space. The activation and updates require a working internet connection. The client application can be also installed on the Windows Phone 5 devices, but anti-theft and browsing protection features are not supported.

SUPPORTED DEVICES

F-Secure Mobile Security™ 6 for Windows Phone client application supports devices running on top of Windows Phone 6, 6.1 and 6.5 versions. The list of supported devices is maintained at <http://mobile.f-secure.com/devices/index.html>.

Note! Browsing protection and anti-theft functionality are not available for Windows Phone 5 devices.

LANGUAGE SUPPORT

F-Secure Mobile Security™ supports 24 languages. The language is selected based on the device language. In case the device language is not supported, English version will be used. Full list of supported languages is at <http://mobile.f-secure.com/devices/index.html> .

KNOWN ISSUES

- FSMS software binary update (OTA) can block Push email synchronization. Push email recovers after the client is restarted.
- Browsing protection doesn't work in Windows Phone 5.0
- Anti-theft protection doesn't work in Windows Phone 5.0
- Browsing protection is supported only when Internet Explorer is default browser.
- Blocked total and Blocked today counts in Firewall status may show briefly different counts even though all blocked connections would have occurred "today". This happens because the blocked total count is kept in settings and the blocked today count is kept only while FSMS is running.
- Scanned today count will show that some files has been scanned after the restart of FSMS even if the scanning mode was manual. This is because the client application scans it's own files at start-up.
- Scan statistic are not updated in real-time. The statistics are updated to the final result after the scan has completed.

INFORMATION ABOUT THE USE OF THE APPLICATION

Information about the use of the application is available in the User Guide (eng only). User guide and quick guides are available at <http://mobile.f-secure.com/manuals/index.html>.
