

# F-Secure Mobile Security™ for UIQ

## 1. Installing and Activating

### Installing

#### To install:

- Download the installation file to your computer and move it to the device,
- Download the installation file to your computer and install the product via Sony Ericsson PC Suite, or
- Download the installation directly to your device. Installation starts automatically.

After the installation, restart the device if the installation asks you to do so. When the installation is ready, you need to activate the product. The product does not protect your device if you have not activated it.

### Activating

#### To start the activation:

1. Open the application. The Welcome screen is displayed.
2. Press **Continue** to continue.
3. Select the activation type:
  - To start the evaluation period, select **Free evaluation** as the activation type if it is available and press **Done**, or
  - To have the fully licensed version, select **Subscription code** as the activation type, and press **Done**. Enter your subscription number and press **Done**.

4. Press **Yes** and select the Internet access point to connect to the update service and start downloading the updates, or press **No** to cancel the activation.

The application connects to the update service and submits your subscription number. During the first update, the application downloads the latest virus definition database.

5. When the download is complete, a message informs you that the registration was successful and that the application is activated. Press **Continue** to finish the activation.
6. After you have finished the activation, scan your device for viruses to make sure your device is clean. See the [Scanning for Viruses](#) section below.

*You should scan your device whenever the application asks you to.*

## 2. Scanning for Viruses

F-Secure Mobile Security works in the background and scans your files automatically.

1. If a virus is found during the real-time scan, a message is displayed. Press **Yes** to view the infected file(s), or **No** to close the dialog.
2. The Infections view contains a list of infected files on the device and the state of the file (either quarantined or released).
3. To view more details about an infected file, select the file and select **Details** from the menu.

### Processing Infected Files

**To process infected files:**

1. In the Infections view, select the infected file to be processed.
2. Select **Process marked** from the menu.
3. From the **Process marked** menu, select the desired action.

You can process the infected files in one of the following ways:

- **Quarantine** - quarantine the infected file. A quarantined file is locked and cannot harm your device when F-Secure Mobile Security is on.
- **Delete** - delete the infected file. This is the recommended option. The file will be removed completely from your device.
- **Release** - release the quarantined file. If you release a file, it will not be locked any more. You access it at your own risk.

## 3. Preventing Unauthorized Network Traffic

The firewall in F-Secure Mobile Security works quietly in the background. It monitors incoming and outgoing Internet and network information, and protects you from intrusion attempts. The predefined firewall levels allow you to instantly change the level of protection according to your needs.

### Selecting Firewall Level

**To select the firewall level:**

1. In any of the views, select **Settings** from the menu.
2. Select **Firewall protection** and select the desired firewall level:
  - **Allow All** - allows all network traffic.
  - **Normal** - allows all outgoing connections and blocks all incoming traffic.
  - **High** - allows most commonly used applications and blocks all incoming traffic.
  - **Deny All** - stops all network traffic.
3. Press **Select**.

## 4. Keeping the Product Up-to-Date

### Automatic Updates

F-Secure Mobile Security includes an automatic update service, which means that the virus definition database in the application is updated regularly. Only an up-to-date virus definition database protects your device against the latest viruses. Automatic updates are in use after you have activated the product.

The application requires an active Internet connection for the updates. When a connection to the Internet is available, the application checks when the virus definition database was last updated and downloads new updates if necessary.

## Manual Updates

### To update the application manually:

1. In any of the main views, select **Update** from the menu.
2. Select the Internet access point to connect to the update server. The application downloads the latest virus definition database and takes it into use immediately.
3. When the update is finished, press **Yes** to scan your device for viruses if you are prompted to do so. See the [Scanning for Viruses](#) section above.

## Version Updates

When a new F-Secure Mobile Security version is available, a message asks you to download it. The application restarts automatically when the update is completed.

## Technical Support

For more information, download the *F-Secure Mobile Security for UIQ User's Guide* (available in English) at <http://mobile.f-secure.com/>

If you have questions about the application not covered in the guides or in the online services, you can contact your local F-Secure distributor or F-Secure Corporation directly.
